## sorting

## 100 points

Source code: sorting.c, sorting.cpp, sorting.pas
Input files: sorting.in
Output files: sorting. out
Time limit: 0.3 s
Memory limit: 64 MB

Little P has just learned the shell-sort sorting algorithm. He was given some code that sorts an array of N integers in ascending order. Let A be the array to be sorted.

| Pascal | C/C++ |
| :---: | :---: |
| ```gap := X; repeat ok := 1; for i := 1 to N - gap do if A[i] > A[i+gap] then begin temp:=a[i]; A[i]:=A[i+gap]; A[i+gap] := temp; ok := 0 end; if gap div 2>1 then gap:=gap div 2 else gap:=1 until ok=1;``` | ```gap = X; do { ok = 1;ss for (i = 1; i<= N - gap; i++) if (A[i] > A[i+gap]) { temp = A[i]; A[i] = A[i+gap]; A[i+gap] = temp; ok = 0; } if (gap/2 > 1) gap=gap/2; else gap=1; } while (ok == 0);s``` |

where i, $\mathrm{N}, \mathrm{X}, \mathrm{gap}$, temp, ok are integers (int for C/C++, longint for Pascal).
While typing this code, little P forgot to copy line 11.

## Task

You are given the array to be sorted, A. A has N distinct elements, all between 1 and N .
You are asked to find all the values X for which the algorithm (without line 11) sorts A . We call these X values to be valid.

## Input

The input file sorting. in has 2 lines. The first line has one integer, $N$. The next line describes $A: N$ integers separated by one space.

Day 1

## Output

The output file sorting. out should have the number of valid values X on the first line. The second line should have all the valid values $X$, separated by one space. They should be sorted in ascending order.

## Restrictions and remarks

- $1<N<500000$
- $1 \leq \mathrm{X} \leq \mathrm{N}-1$

Example

| sorting.in | sorting.out | Explanations |
| :---: | :---: | :---: |
| $\begin{array}{lllllll} \hline 6 & & & & & \\ 4 & 2 & 6 & 1 & 5 & 3 \end{array}$ | $\begin{array}{ll} 2 & \\ 1 & 3 \end{array}$ | N is 6 and A is: $4,2,6,1,5,3$. Valid values for X are: <br> - $\mathrm{X}=1$, we swap the numbers on the following positions (1,2), (3,4), (4,5), (5,6), (2,3), (4,5), (1,2), $(3,4)$; <br> - $\quad \mathrm{X}=3$, we swap the numbers on the following positions (1,4), (3,6). |
